

FIELD INSPECTION PLATFORM

ResiWalk

How to use the app end to end — inspections, the camera & AI tools, scoping, review, approval, and reporting.

Audience: Internal team & 1099 contractors

Version: June 2026

Contents

This guide walks through ResiWalk end-to-end — from signing in to finalizing and reporting. Internal staff and 1099 contractors use the same app; sections that differ by role are called out. Screens shown throughout are from the live app.

- 1 Getting Started — Install & Sign In
- 2 The Home Screen
- 3 Scheduling & Assigning Inspections
- 4 Inspection Types at a Glance
- 5 The Camera & Media Tools
- 6 The 1099 Leasing Agent Inspection
- 7 The Scope Rate Card Inspection

- 9 The Final Checklist
- 10 AI Review (before you submit)
- 11 Submitting, Approval & Hand-off
- 12 The Turn Reinspection
- 13 Reports & PDFs
- 14 Good to Know (autosave, offline, audit)

THE BIG PICTURE

ResiWalk turns a property walk into a structured, photo-backed record. You inspect, the app validates your entries with AI, a manager approves, and the system auto-generates the reports, emails the team, opens a maintenance ticket, and pushes tenant chargebacks to the ledger — no manual paperwork.

1 Getting Started — Install & Sign In

Install the App

- **Android:** Go to resiwalk.com/install and add the app to your home screen.
- **iPhone / iPad:** Open resiwalk.com in Safari, tap Share, then "Add to Home Screen."
- **Anywhere:** You can also just use resiwalk.com in a browser.

Sign In

- **Internal Team:** Enter your Resi email and confirm with your Google account.
- **1099 Contractors:** Sign in with Google or Microsoft — whichever matches your email.

SECURE & SIMPLE

Everyone signs in with their work email — no separate password. Only active users can sign in; deactivated accounts are blocked automatically.

ResiHome Inspections - vf9d20a7

Sign in with Google (staff) or Microsoft (1099).

2 The Home Screen

The home screen is your inspection pipeline — every open inspection in one list.

Find What You Need

- **Filter:** by inspector or by template (inspection type).
- **Sort:** by date or by community; flip the sort direction.
- **Status Toggles:** All, Scheduled, In Progress, Pending Approval, Completed — each with a live count.
- **Paging & Search:** search by address/name/inspector, and page through results.
- **Completed:** open any completed inspection to review it and download its PDFs.

The pipeline: search, status counts, filters, and inspection cards.

3 Scheduling & Assigning Inspections

Inspections are created from the property record — most details fill themselves in.

Auto-Populated from HubSpot

Region, property status, bedroom & bathroom counts, and the scheduled date all pull straight from HubSpot — no re-typing.

Before You Start

- 1 Pick the inspection type (template) and the property.
- 2 Reschedule, or reassign to a different user (active staff only).
- 3 Tap Begin Inspection to go straight in.

ACTIVE USERS ONLY

The assignee list shows active users only — you can't assign an inspection to someone who has been deactivated.

Begin Inspection

New Inspection — template, property, beds/baths, date & inspector pre-filled.

4 Inspection Types at a Glance

ResiWalk supports several templates; the app shows the right questions and tools for each.

- **1099 Leasing Agent:** Guided photo & question walk — listing health, condition, HVAC, meters, trash.
- **Scope Rate Card:** The full turn scope — line items, quantities, vendors, pricing, tenant chargebacks.
- **Turn Reinspect QC:** Verify a vendor completed the scoped work, line by line, against the before photos.
- **Community Visit:** Confirm a community looks right and everything is in shape.
- **Vacancy / Occupancy Check:** A quick drive-out to confirm whether a home is vacant or occupied.
- **New Construction RQC:** Readiness / quality-control report for built-to-rent and construction hand-off.

SAME TOOLS EVERYWHERE

Every template uses the same camera, markup, voice, and validation tools — learn one inspection and you know them all.

5 The Camera & Media Tools

Photos and video are the backbone of every inspection. The in-app camera does a lot.

Capturing

- **Two Levels:** add photos to a line item, or to a whole section/room.
- **Photos:** tap the shutter; rapid-fire is supported for capturing several shots fast.
- **Video:** tap the video toggle to switch to video mode, tap record to start, then tap again to stop — clips save right alongside your photos.
- **Location-Stamped:** each capture stamps address, time, GPS, and on-site vs. off-site distance — proof of where it was taken.
- **Lenses & Zoom:** pinch/drag to zoom; tap the lens chips to switch to a sharper lens (remembered next time).
- **Flash:** switch to the phone's native camera when you need the flash.
- **Tap to Focus:** tap anywhere on the frame — even while recording video.

Review & Mark Up

- **Swipe:** move through photos and video clips together in one viewer.
- **Mark Up:** annotate with arrows, circles, or a pen in brand colors.
- **Built-In Gallery:** pull in an existing photo right from the camera — no separate upload.
- **Tag to a Line Item:** attach a photo or clip to the exact scope line it documents.

In-app camera: location badge, lens chips, gallery, mark & shutter.

Markup: arrows & circles over the location-stamped photo.

6 The 1099 Leasing Agent Inspection

A guided walk that captures the home's condition and listing health. The header shows type, status, listing price, and how long it's been listed — plus your pass/fail tally and "all changes saved."

What You'll Cover

- **Listing Feedback:** evaluate listing price (Reduce / Keep / Increase) and lead feedback (Good / Fail).
- **Action Required:** a Fail prompts a required note and optional photos so the issue is documented.
- **Whole House, HVAC & Utilities:** device hubs, exterior & interior photos, HVAC components, filters, meter numbers, trash bins.

Answer the questions, capture the required photos, then Submit. The progress count (e.g. "8/19 answered") shows what's left.

The screenshot shows the ResiWalk app interface for a 1099 Leasing Agent Inspection. At the top, the address is 2592 Fairview Blvd, Fairview, TN, 37062, with details: 3 bed / 2 bath · 1,700 sqft. The listing price is \$2,045, and it was listed on 5/6/2026. The status shows 3 Pass and 2 Fail. A green checkmark indicates "All changes saved".

The main section is titled "Overview" with a progress indicator of 2/5. Below this, there is a "PHOTOS (Optional)" section with 4 added photos and a "Take" button. The "Evaluate Listing Price" section has three buttons: "Reduce", "Keep", and "Increase". The "Lead Feedback" section has two buttons: "Good - No Issues" and "Fail - Needs Attention".

The "ACTION REQUIRED" section is highlighted with a yellow border. It contains a "Note (Required)" field with the placeholder text "Describe the issue or action needed" and a "Photos (Optional)" section with a photo thumbnail and a plus sign for adding more photos.

At the bottom, there are two buttons: "Save & Close" and "Submit".

A question with pass/fail, required note, and photos.

7 The Scope Rate Card Inspection

The full turn scope and the financial heart of the app — you build the work room by room and it prices it.

Build the Scope

- **Sections (Rooms):** add, rename (pencil), or delete (X) sections.
- **Line Items:** pick a category, sub-category, and item; set quantity; choose the vendor; adjust the vendor price or tenant bill-back %.
- **Auto-Proration:** the tenant chargeback is automatically prorated by how long the tenant lived there.
- **Internal Resolution:** assign a line to "Internal Resolution" for work your team completes in-house (with a Now/Later choice and after-photos).

See the Money Before You Submit

- **Totals Strip:** Lines, Vendor, Client, Tenant, and Net Turn update live at the top.
- **Drill-Down:** "Expand all" breaks costs out by category and line item across Vendor, Tenant, and Net.

VALIDATE THE CHARGEBACK

Before finalizing, confirm the tenant total lines up with what you expect — the drill-down makes it a quick check.

Add a line — category, qty, vendor, tenant %, live pricing.

Expand-all drill-down by category, with the live totals strip.

8 Adding Lines by Voice & Camera AI

You don't have to tap through menus — talk to it, or point the camera and describe what you see. (Look for the mic and AI buttons in the scope footer.)

Voice Assistant

- 1 Tap the microphone at the bottom of the scope.
- 2 Say the work plainly — e.g. "clean whole house, level one sales clean," or "go to the kitchen and replace the microwave."
- 3 It finds the matching catalog line, prices it, and reads back what it added. The mic stays open so you can reply or add the next item without tapping again.

Camera AI

Open the AI camera and describe (or scan) the issue — it suggests the right line item in real time. Great for capturing a defect and scoping the fix in one motion.

SPEAK NATURALLY

List several things in one breath ("the yard needs leaves raked and a gutter cleaning, 50 linear feet, two-story") — it splits them into separate lines and asks if it needs a quantity.

9 The Final Checklist

At the bottom of the scope, a closing checklist makes sure the essentials are captured. (The 1099 inspection has a similar checklist.)

- **Bluetooth Lock:** mark online/offline and record the serial number.
- **Universal Garage Remotes:** if missing, the app offers to add the line — choose "Add line" or "Not needed." Added lines appear back at the top.
- **Mailbox:** same add-line prompt if missing.
- **HVAC:** confirm it's functioning; if not, you can be prompted to add a service/clean line.
- **Major Appliances + Label Stickers:** photograph the label/serial stickers — feeds warranty tracking.
- **Air Filters:** capture filter details for the Second Nature delivery program.
- **Final Notes:** add anything else about the inspection.

PROMPTS CATCH MISSES

The checklist actively prompts you to add the right line when something's missing — so remotes, mailbox keys, and HVAC service don't slip through.

10 AI Review (before you submit)

Before a Scope Rate Card can be submitted, it runs an AI Review — a second set of eyes on your scope.

What It Checks

- **Logic:** do the selected line items make sense together?
- **Duplicates:** flags work scoped twice (e.g. cleaning a carpet you're replacing).
- **Missing Info:** prompts you to add a photo, or to justify a missing cleaning or painting scope — so nothing's skipped.

You're in Control

For each suggestion you can **Edit**, **Add**, or **Ignore** it — in real time. Nothing changes without you.

GREEN MEANS GO

Once you've worked through it, the review turns green and Submit unlocks — a quick pass keeps quality high before a manager sees it.

11 Submitting, Approval & Hand-off

Submitting a scope kicks off an approval and automation chain — what used to be manual now happens for you.

The Flow

- 1 You submit, and the inspection moves to Pending Approval.
- 2 A regional manager or director reviews the line items and photos and confirms they match before dispatch.
- 3 They hit Finalize.

What Finalize Does Automatically

- **Generates the PDFs:** master, vendor, and tenant chargeback.
- **Emails Them:** to the SODA box.
- **Creates a Turnkey Ticket:** in Honeybadger MM — documents attached, under Unit Turns — for the MC to dispatch.
- **Pushes the Charge Import:** to the ledgers for tenant chargebacks. Issues route a second email to the SODA box for PM Accounting.

TWO SETS OF EYES

The person who submits a scope can't finalize their own — a second reviewer must approve it. Every turn is double-checked.

12 The Turn Reinspection

After the vendor completes the work, create a reinspection to verify it — quickly, against the original scope.

How It Works

- 1 Create a Turn Re-Inspect QC. It defaults to the most recently submitted scope and copies every line with its "before" photo.
- 2 Go line by line: see the before photo, then validate the work — a quick Pass / Fail.
- 3 Take the "after" photo for each line as proof.
- 4 A Fail requires a note explaining what happened and what's needed.
- 5 Give the overall inspection a Pass / Fail at the end.

The overall result determines whether the property goes **On-Market** or stays **Under Turnkey** until failed lines are done. On submit, the maintenance coordinator is notified in real time.

Turn Re-Inspect QC

— 1304 Lyric Drive, Fort Worth, TX, 76134

Inspector: Lacy May · 4 bed / 2 bath · 1,923 sqft ·
Validating: Rate Card — 1304 Lyric Drive, Fort Worth, TX, 76134 — 2026-06-04

7 items Vendor: All Vendors Collapse all

6 pass · 1 fail

This inspection is completed and read-only.

Yard / Exterior · 2 lines 1 pass · 1 fail

BEFORE (22)

AFTER (7)

Landscape · Grass Cut · **Regular Grass Cut**

Cut grass at appropriate height and collect, bag or rake trimmings, to keep the yard looking healthy

Vendor 1 1 HR · \$53.94

Failure note (required) — what failed & how to fix it

Need to mow the grass and send it to ramp

Landscape · Trees · **Branches Trim**

Trim all branches and limbs to at least 6 feet from the roof and exterior walls and manicure shrubs down and away from the front windows to let in light.

Vendor 1 35 LF · \$287.86

Reinspect: before/after strips, per-line pass/fail, required fail note.

13 Reports & PDFs

Every finalized scope produces a clean set of PDFs, downloadable from the completed inspection.

The Documents

- **Master Report:** page 1 is a summary of every line item; following pages break it down by room and section.
- **Per-Vendor PDFs:** and the Internal Resolution PDF — full transparency for each vendor and in-house work.
- **Tenant Chargeback:** PDF and the charge import (xlsx).

Clickable Photos

Every photo in a PDF is clickable — it opens the actual photo gallery to swipe through. These are public links vendors can open directly.

CHARGEBACKS ARE AUTOMATIC

On finalize, the charge import file is pushed to the ledgers automatically. Any issue routes to the SODA box for PM Accounting to correct.

Download any document — or all six — from the completed inspection.

The Master report: line-item summary, then photo galleries by room.

14 Good to Know

A few things working quietly in the background that make ResiWalk reliable in the field.

Autosave

You never hit "save." Every answer, line, and photo saves as you work; offline, changes queue and upload the moment you reconnect.

Offline-First Photos

Photos and clips are stored on the device and sync in the background — a dead zone never blocks the walk or loses a capture.

Audit Trail

Each inspection keeps a history under its menu — who submitted, approved, reopened, cancelled, and edited it, and when. Edits log once per session (and again after you leave and return), so the record stays clear without noise.

Updates

When a new version ships, a banner offers a one-tap reload. The app otherwise updates itself in the background.

IF SOMETHING LOOKS OFF

Reload from the update banner (or fully close and reopen the app) to be sure you're on the latest version before reporting an issue.
